STAND UP TO THOSE HARD KNOCKS

There is a lot to love about wood. Our entry doors celebrate the organic beauty of wood and the craftsmanship of classic woodworking that help give your home a timeless look and feel... while employing materials better suited to withstand the elements that age and wear out normal wood doors.

Both fiberglass (textured or smooth) and steel (smooth) doors consistently outperform wood doors and top the list of home improvements that return on the homeowner's investment. The type of surface you choose mostly depends on your taste.

LIKE WOOD, ONLY **BETTER**

NATURAL WOOD APPEARANCE

**BETTER THAN WOOD AT RESISTING
HUMIDITY, EXTREME TEMPERATURES**

HOLDS STAIN/PAINT BETTER THAN WOOD

FEATURES MATCHING INTERIOR TRIM

REPELS INSECTS

SURFACE

TEXTURED

Emulate and celebrate natural wood grain (Fiberglass).

*770|771 CRAFTSMAN only **715|716 PLANK only

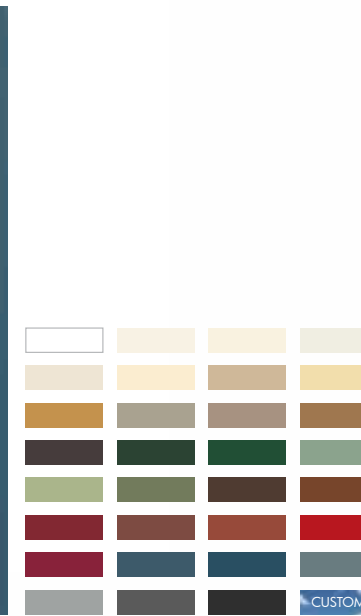

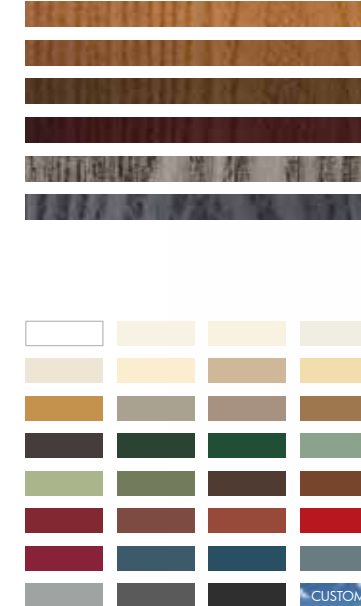

SMOOTH

Crisp and clean, perfect for painting (Fiberglass or Steel).

COMPONENTS ON EVERY DOOR WE BUILD

Your entry door is the focal point of your home. With our wide range of door styles, decorative and classic glass selections, stains, paints, hardware and other options, we can help you make a statement while making a renovation. The possibilities are nearly endless, but these features make every entry door that we make the entry door for you and your home.

MATCHING FRAME STAIN

Frame components are expertly hand-stained with two coats before assembly, for maximum coverage and seal. Matching frames unify your entire entryway, including sidelites and transoms.

COMPOSITE FRAME & JAMB

Full composite frames will not rot, allow infestation, or absorb water due to rain, snow, or ice. They can be painted or stained to match the door or your home.

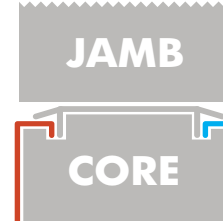

PROPRIETARY HINGES

Our specially designed ball-bearing hinges have an anti-pry feature for added security and come standard to match your door's other hardware.

PERIMETER WEATHERSTRIPPING

The continuous strip of high performance thermoplastic elastimer (TPE) weatherstripping seals the top and sides of the door against the frame when closed, eliminating drafts and air leaks around the door.

SOLID CORE & THERMAL BREAK

Our solid polyurethane core provides the highest insulating values for energy efficiency... far outpacing wood doors, while resisting humidity and temperature change better than wood does. NBP makes the only wood edge steel doors with a true thermal break. Vinyl extrusion locks together the steel skins while eliminating the transfer of heat or cold.

FRAME BENEFITS

The hardened metal L-Frame and reinforced lock and hinge plates provide greater strength and security than steel. Our aluminum door stop is designed to provide the optimal fit, assuring a durable weatherseal to resist the elements.

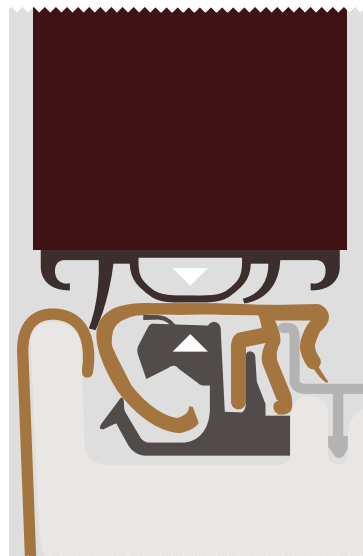

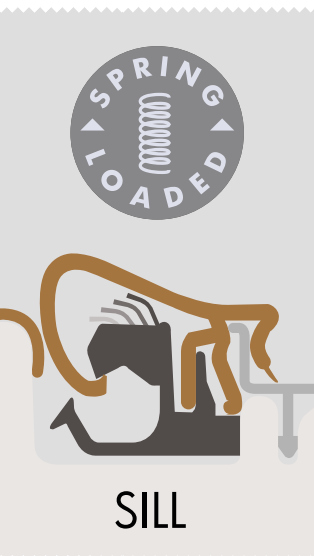

STEEL REINFORCEMENT PLATE

Constructed from cadmium plate steel, our reinforcement plate provides further security around the deadbolt.

HARDWARE

A door is only as strong and safe as its hardware...

ENDURA Z-ARTICULATING CAP SILL & SWEEP

Spring-loaded and automatically adjusts, delivering constant protection against leaks, drafts, and insects, even when conditions aren't perfect or change over time.

THERE ARE TIMES TO PLAY IT

SAFE

It seems obvious... and yet, not everyone gets it. Northeast does. A door is only as strong and safe as its hardware. Every Camelot® entry door is built using Kwikset®, the obvious choice for safety and ease of use.

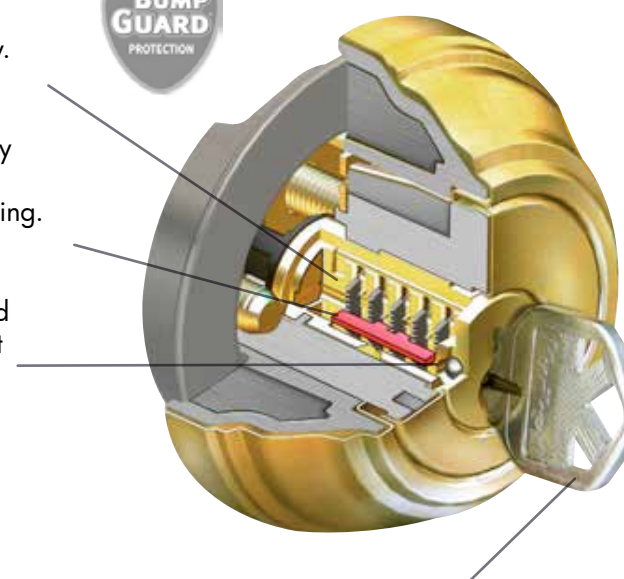

SUPERIOR LOCK-PICK RESISTANCE

NEW TECHNOLOGY
Locking bar, racks and pins are made out of stainless steel for increased strength and durability.

BUMPGUARD™
Patented side locking bar technology replaces a traditional pin & tumbler design to protect against lock bumping.

DRILL RESISTANCE
Cylinder uses two steel balls inserted into the front of the key face to resist attack from drilling.

KEY IT YOURSELF
With the included Learn Tool, the lock is rekeyable in less than 30 seconds, without removing it from the door.

LET THERE BE

GLASS

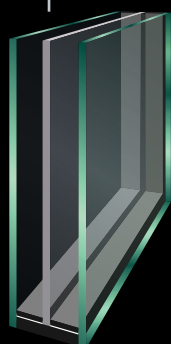

Your entryway's glass is how you choose to allow more light into your home. Here it is brought to the level of an art form. We give you the opportunity to decorate not just your door, but also the light you allow into your home, a special collaboration between you and light itself.

Highly skilled artisans cut and craft styles by hand, mitering and soldering each component into meticulously designed artistic patterns. Each glass style is conceived using glass textures, bevels and coming options making for an abundance of design options.

Most decorative styles are produced as triple-layer insulated glass, with the decorative center core sheltered inside two panes of safety tempered glass. Decorative styles with wrought iron are produced as double-pane insulated glass, with the ironwork sheltered inside two panes of safety tempered glass.

DECORATIVE LAYER

CAMING

Material bonding glass segments or forming decorative elements.

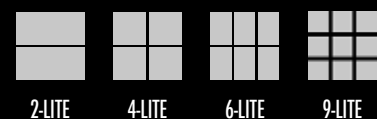

PRIVACY

A factor in choosing glass, rated from 1 (least) to 9 (most).

GRIDS

External (matches door color) or Internal (white).

INTERNAL BLINDS

Operable miniblinds housed within insulated glass.

SIDELITES

For configurations including sidelites, the decorative glass styles shown can be chosen to allow more or less light through your entryway while creating a unified, matching appearance across your entire entryway. When availability allows, matching lite lengths are ideal. Full sidelites complement most door styles.

**Full Craftsman Sidelites have glass sizing and characteristics specific to Craftsman doors.*

MODERN LOVE

Spotlights are constructed with performance features that style-savvy homeowners look for. Both the textured Spotlights door surface and FiberMate® molded and textured frame works equally well for painting or staining, providing NBP's full range of colors.

GLASS

Small and large glass sizes, horizontal and vertical shapes, and choices for the number, orientation, and type of glass give you plenty of flexibility for exactly the style, privacy, and price you desire.
